DATA ANALYST

Intenship Task 2

DESCRIPTION

Cleaned and analyzed an Amazon product sales dataset using Excel by creating pivot tables and charts to study pricing, discount patterns, and customer ratings. Summarized key business insights through a structured dashboard and exported the analysis for reporting and presentation.

MY WORK

As part of my data analysis task, I worked with an Amazon product dataset sourced from Kaggle 📦 and cleaned the data to improve accuracy and consistency. This included standardizing actual and discounted prices into a uniform currency format 💰 and preparing key fields for analysis. I then created an Excel workbook with four pivot tables 📊 to examine pricing trends, discount patterns, and customer rating distribution. To clearly present insights, I developed a separate sheet containing four charts 📈. This project demonstrates my ability to clean data, perform pivot-based analysis, and communicate insights effectively using Excel 🚀
